70 YEARS AGO THE GENESIS OF SOMETHING VERY SPECIAL OCCURRED IN A TINY TIN SHED IN HOPE, ARKANSAS

In 1946 Paul W. Klipsch — genius, madman and maverick — designed and hand-built the legendary Klipschorn® loudspeaker with the goal of bringing live music into his living room. He was an American audio pioneer and a true eccentric. PWK gave rise to speaker technologies that would forever impact generations of music lovers.

Today, in this honored tradition, we move forward, pushing the boundaries of art and science — while driving new technologies to deliver an ever-incredible listening experience.

Remember great sound? We never forgot.

We are THE KEEPER OF THE SOUND®.

WHY KLIPSCH?

Every Klipsch speaker is driven by the four critical philosophies of speaker design pioneered by our founder, Paul W. Klipsch.

**HIGH EFFICIENCY**
The highest sound output for a given wattage input

**LOW DISTORTION**
Even the softest sounds are heard with clarity and detail, the loudest sounds without harshness or distortion

**CONTROLLED DIRECTIVITY**
The accurate projection of sound which, in turn, allows even distribution of sound in a given area

**CONTROLLED FREQUENCY RESPONSE**
Producing the required response to maximize various acoustic environments

Whether in the home, on the stage, in a house of worship, in a music club, in the cinema, in the boardroom or in your favorite store or restaurant; our sound is uniquely detailed and clear. Our exclusive Tractrix® Horn-loaded technology reproduces truly engaging audio at even lower, background levels. With thousands of installations around the world and a dedicated team to back them up, Klipsch can provide the perfect sonic atmosphere for any setting.

KPT-CINEMA GRANDEUR
4-WAY FULLY HORN-LOADED SYSTEM FOR THE GRANDEST AUDITORIUMS

Following on the design of the KPT-MCM Grand system, Klipsch has designed the new KPT-Cinema Grandeur fully horn-loaded, four-way cinema system using state-of-the-art drivers and a redesigned low frequency enclosure that’s only 31” deep. The result is the ultimate in audio performance for the largest and finest exhibition spaces.

KPT-MCM-II Q
4-WAY FULLY HORN-LOADED SYSTEM

The first fully horn-loaded THX®-Approved four-way cinema system, the KPT-MCM-II-Q affords the ultimate in audio performance for even the largest exhibition spaces. This quad-amp model allows the utmost in customization by utilizing four separate amplifiers to designate power levels, EQ and crossover settings for each driver set to create a perfectly balanced audio experience with today’s complex digital soundtracks.

KI-398-RGL HIGH OUTPUT 2-WAY VERTICAL LINE ARRAY SYSTEM

Why Line Array?

In large auditoriums, loudspeaker pattern control is important to ensure the sound is sent to the right place. This is particularly true at low frequencies where the wavelength of sound will be much larger than an individual speaker – making it impossible to control. By coupling several loudspeakers together in an array, you physically increase the size of the acoustic source – extending the low frequency pattern control to a much lower frequency, resulting in less sound being reflected from the ceiling and back into the listening space.

In addition, a vertical line array will typically feature higher SPL (Sound Pressure Level) capability simply due to a higher number of drivers being used, therefore relieving stress on the system to achieve the same SPL.
KPT-745-Q
4-WAY SPACE SAVING SYSTEM FOR GRAND AUDITORIUMS

Following the success of the KPT-MCM-II fully horn-loaded four-way cinema system, Klipsch designed the four-way KPT-745-Q to deliver similar movie chills and thrills but from a much shallower cabinet. Less than 24 inches in depth the KPT-745-Q system is perfect for larger theater venues with limited space behind the screen. Traditional Klipsch efficient design for a smaller footprint with large cabinet dynamic realism.

**KPT-JUBILEE/535-B**

3-WAY FULLY HORN LOADED SYSTEM FOR MEDIUM TO LARGE AUDITORIUMS

The Jubilee utilizes an ultra-efficient, fully horn-loaded architecture complementary to the larger KPT-MCM II, but in a more shallow three-way design, boasting a 24-inch depth as the ultimate space-saving solution. Developed by audio pioneer Paul W. Klipsch in 2001, it performs flawlessly with dual 12-inch horn-loaded woofers for tight, realistic bass output and a Tractrix® Horn mid-bass unit coupled to a two-inch exit titanium compression driver. The high frequencies are easily handled with a large 2.75-inch compression driver mated with a Tractrix® Horn.

**NOTES:**

- Full horn-loaded three-way system
- Dual horn-loaded 12” woofers
- Two-inch exit titanium compression driver
- Bi-amp configuration

**KPT-535-4-T**

3-WAY EXTENDED BASS SYSTEM FOR MEDIUM TO LARGE AUDITORIUMS

This THX®-Certified system utilizes a quad 15-inch direct-radiating bass unit for greater output in large auditoriums. Yet its 24-inch depth minimizes the valuable theater space consumed by the area behind the screen. The dialogue range is superbly handled by a large 3” compression driver mated to a Tractrix® Horn. A high-performance 2.75-inch, Tractrix® Horn compression driver HF system ensures smooth effortless treble reproduction.

KLIPSCH GIVES YOU THE MOST OPTIONS

Our behind-the-screen systems offer many models with passive networks to reduce amplifier numbers, wire runs, labor hours and setup time.

KPT-535-T
3-WAY SYSTEM FOR MEDIUM TO LARGE AUDITORIUMS

Once moviegoers experience the unbridled dynamics and intense realism of this THX®-Certified system they’ll have their own personal favorite theater. The dual 15-inch direct-radiating bass unit produces clean, deep bass, yet its 24-inch depth minimizes its footprint to fit into more shallow behind the screen areas. The dialogue range is superbly handled by a large 3” compression driver mated to a Tractrix® Horn while a high-performance, Tractrix® Horn-loaded 2.75-inch compression driver reproduces detailed high frequencies.

SPECIFICATIONS

- High output Dual 15-inch bass unit with less than 24 inches depth
- High frequencies effortlessly reproduced by dual titanium compression drivers
- Tri-amp configuration

KLIPSCH HIGH EFFICIENCY DESIGN

Power handling specifications only tell you how much a driver takes to be overdriven. A system’s sensitivity can tell you what sound pressure level (SPL) you’ll attain at any given distance. High-efficiency speakers allow high-power amplifiers to continuously output their cleanest watts, saving peak watts for dynamic headroom only and creating more sound from each watt input.
NOTES:

• Two-inch exit titanium compression driver
• Bi-amp or mono-amp configuration

KPT-335-B/M
3-WAY SMALL AUDITORIUM SYSTEM WITH BUILT-IN BI-AMP OR MONO-AMP OPERATION

At just 12.25 inches in depth, the KPT-335-B is one of the most compact three-way behind-the-screen systems available. Yet, its traditional Klipsch efficiency delivers impactful, detailed sound to smaller-sized venues. The dialogue range is superbly handled by a 2” compression driver mated to a Tractrix® Horn while a high-performance, Tractrix® Horn-loaded 1.75-inch compression driver reproduces detailed high frequencies.

NOTES:

KLIPSCH PASSIVE PROCESSORS

Klipsch offers more passive-processor equipped front-stage sound solution options than anyone else. They allow mono-amp operation with Klipsch two-way and three-way systems - and bi-amp operation of Klipsch four-way systems. The benefits of premium speaker component systems allow less amplifiers, less wiring, less labor hours and less setup time and less complexity with plug-and-play operation right out of the box. Much more than just a crossover, Klipsch passive processors combine steep slope and in-phase crossover technology with perfect level matching and time-alignment between components that results in speakers that require little or no EQ to obtain the SMPTE/ISO 2969 X-curve.
### KPT-435-B/M

**3-WAY SMALL TO MEDIUM AUDITORIUM SYSTEM WITH BUILT-IN BI-AMP OR MONO-AMP OPERATION**

As the first full three-way passive behind-the-screen system on the market the KPT-435-B/M affords the ultimate in audio performance for small and medium-sized venues. It is one of the most space-saving speakers in its performance category. Traditional Klipsch high-efficiency design can be utilized as a bi-amp configured three-way system or, by simply changing the crossover network wiring, as a fully-passive three-way mono-amp configuration.

## KPT-942-B

### 2-WAY SYSTEM FOR MEDIUM AUDITORIUMS

The THX®-Certified KPT-942-B is a high-performance two-way screen and stage loudspeaker system well suited to medium-sized auditoriums. Its smaller stature still creates a large soundstage with well-defined imaging. Dual 15-inch driver bass unit delivers powerful bass from a cabinet just 24 inches deep.

THE TRACTRIX® HORN

Klipsch uses a modified Tractrix equation horn geometry on its distributed audio speakers which gains the benefits of three distinct horn types and allows the sound wave to release from the horn with minimal reflections back into the horn. This, combined with the reduced depth of the Tractrix® horn in relation to others, further reduces distortion and improves frequency response and overall sound clarity, even at low background volumes.

KPT-396
HIGH OUTPUT 15" 2-WAY CINEMA SURROUND FOR THE LARGEST AUDITORIUMS

The KPT-396 cinema surround offers high power handling and sensitivity for extremely high output that's required for the largest format cinemas and multichannel surround formats. The KPT-396 provides the ultimate in digital sound reproduction, putting movie audiences right in the middle of the action. By setting a new standard in dynamic range and quality of reproduction, it's the perfect choice for larger cinemas.

KPT-1200-VBM
AESTHETIC DESIGN KLIPSCH VBAT TECHNOLOGY FOR MEDIUM TO LARGE VENUES

The Klipsch KPT-1200-VBM utilizes Klipsch Virtual Boundary Array Technology in a new-look, strong but lightweight, high-aesthetic molded cabinet that complements today’s contemporary cinema interiors. Its 12-inch woofer with 2-inch voice coil combines with dual, skewed horn 1-inch titanium compression drivers for wide coverage while tight vertical dispersion creates a long-distance throw perfect for wider venues. Elliptical inserts on the horns provide even, full-frequency coverage. An excellent choice for new digital formats such as Dolby® Atmos™

NOTES:

• Virtual Boundary Array Technology (VBAT) with a dual skewed horn design provides horizontal coverage in excess of 140°
• Perfect for both the newest surround formats and as a high-value option to reduce surround speaker numbers when cost effectiveness is the primary objective
• Dual skewed horns with elliptical inserts provide even, full-frequency coverage
• Built-in 8° or 15° angles, threaded inserts to accommodate optional Klipsch or industry standard brackets

VIRTUAL BOUNDARY ARRAY TECHNOLOGY

For surround applications, the ability to increase a horn’s horizontal coverage beyond 100° to increase diffusion is limited. Pushing a single horn design to extend past 100° causes the horn’s sidewall to expand faster than the wave front of sound exiting the horn mouth. This creates two undesirable acoustic characteristics: extremely wide coverage at the upper frequencies and narrow coverage at the lower frequency limits. Yet, as new digital sound formats enter the arena, increased surround diffusion will be desired.

Klipsch’s primary goal with VBAT was to increase the amount of surround speaker diffusion but to deliver equivalent SPL as a single horn surround. We used our patented, skewed Tractrix® Horns arrayed side by side on a flat baffle. This creates a wide coverage surround speaker that can still be housed in a smaller cabinet. Each of these horns has a coverage angle that is skewed 70° laterally from the forward axis of the speaker’s baffle. Since both horns are fed the same signal, they can be placed next to each other on a common, flat baffle. The two identical wave fronts support each other, with minimal interference, as they exit the horn mouths. It’s as if there was a physical horn wall or virtual boundary, extending out from the loudspeaker, perpendicular to the baffle.
KPT-4350-MS

FULL RANGE FLYABLE MONOPoint SPEAKER

The KPT-4350-MS is reinforced to be hung or wall-mounted in an auditorium to produce full frequency information. This flexible speaker is at home behind a screen as a full-range height speaker as it is in the back of the auditorium as a full range surround alternative.

SUBWOOFERS
WE’VE GOT YOU COVERED

We realize there are numerous types of cinema venues today, from the smallest houses with the tightest budgets to large multiplexes constructed for the state-of-the-art. We design all of our speakers and subwoofers to be top-performers in their respective categories, and we offer multiple solutions for various seating capacities in order to help you design the perfect system for your individual needs.

NOTES:

• An industry-first horn-loaded vented cabinet design
• High-efficiency with very low distortion perfectly complements today’s digital sound formats
• 130dB continuous output capability
• Pair with the Klipsch KPT-MCM-II or KPT-CINEMA GRANDEUR for a fully horn-loaded cinema front stage!

KPT-1802-HLS
THE INDUSTRY’S ONLY FULLY HORN-LOADED, VENTED SUBWOOFER FOR THE GRANDEST AUDITORIUMS

With an industry-first, patented, horn-loaded vented cabinet design using an 18-inch driver with a 4-inch voice coil for fast attack, the result is class-leading acoustic output combined with commanding 20Hz bass response previously unattainable from even a 21” driver configuration system.

Hz SO GOOD

The combination of the Klipsch KPT-CINEMA GRANDEUR or KPT-MCM-II speaker system with the Klipsch KPT-1802-HLS subwoofer gives you the world’s first fully horn-loaded cinema front stage. Unparalleled full-frequency, low-distortion sound combined with superlative impact and dynamics that can fill even the grandest of auditoriums.
KPT-684

**DUAL 18" DRIVER SUBWOOFER FOR MEDIUM TO LARGE VENUES**

THX®-approved subwoofer with dual 18-inch drivers gain their high efficiency through the use of large geometrically optimized magnet structures and light, rigid cones. The enclosure is constructed of one-inch void-free birch plywood and features internal cross braces at all cabinet joints.

**LOW PROFILE SUBWOOFER FITS RESTRICTED AREAS IN MEDIUM TO LARGE AUDITORIUMS**

An advanced 4-inch voice coil with a stiff, but light, 18-inch driver in a bass-reflex design attains a low frequency of 18Hz, allowing audiences to feel as well as hear its earth-shaking bass. Yet, its 23-inch depth can place it behind screens where other subwoofers would never go.

**HIGH QUALITY SPEAKER TRANSFORMERS**

The use of less expensive transformers in speakers in a 70/100V system can severely degrade frequency response, especially in low-end (bass) response, due to limits of the transformer’s core, leading to core saturation. Klipsch uses only high-quality, low loss transformers with a much higher core saturation limit in our distributed audio speakers, significantly reducing low-frequency compression and distortion.
## TRACTRIX PORTS

Just as the Tractrix curvature decreases reflections back into the horn for greater clarity, the Tractrix ports on all three Klipsch In-Ceiling distributed audio speakers significantly reduce port “chuffing” and allow more output before compression than typical ports.

### IC-400-T

5-INCH TWO-WAY IN-CEILING LOUDSPEAKER

The two-way IC-400-T features a 5-inch woofer and 1-inch Titanium Diaphragm Compression driver on a 2-inch round Tractrix® Horn for smooth response with constant directivity. A Tractrix® port design helps to provide deeper, fuller bass with less compression and distortion. A new, more compact design simplifies low ceiling mounting.

### KPH-525

When overhead sound distribution is a challenge due to either a high or a lack of a suspended ceiling, the Klipsch KPH-525 Pendant Housing combines with either the Klipsch IC-400-T or IC-525-T In-Ceiling speaker for an aesthetic, great sounding solution.

- Aluminum pendant housing in black, white or paintable for customization
- Designed to specifically house either the Klipsch IC-400-T or IC-525-T In-Ceiling 70/100 Volt speakers
- Perfect for high-ceiling structures or areas with no suspended ceiling for direct, overhead distributed sound
- Includes the necessary mounting hardware for typical suspended installation scenarios

1. 3M, Half-space anechoic
2. AES Standard, continuous pink noise 40Hz-10kHz, 6dB peaks
3. Continuous at 1M specified by constant voltage, calculated logarithm
4. SPL at 1M, half-space anechoic with 2.83V input
IC-525-T
5.25-INCH TWO-WAY IN-CEILING LOUDSPEAKER

The two-way IC-525-T features a 5.25-inch woofer, and a titanium diaphragm compression driver on a 3.5-inch round modified XT Tractrix® Horn for smooth response with constant directivity. A Tractrix port design helps to provide deeper, fuller bass with less compression and distortion, while a new, more compact design simplifies low ceiling mounting.

SPECIFICATIONS
- Frequency Response 1 (±3 dB): 65-20kHz ±4dB
- Power Handling 2: 65w (8 ohm bypass)
- Max Continuous Output 3: 106dB
- Sensitivity 4: 89dB
- Nominal Impedence: 8 ohm (8 ohm bypass)
- Tweeter: 1” (2.54cm) Titanium diaphragm compression driver
- High Frequency Horn: 90° x 90° Tractrix® horn
- Woofer: 5.25” (13.21cm) woofer
- Tap Settings: 3.8w, 7.5, 15w, 30w @ 70V / 7.5w, 15w, 30w @ 100V
- Enclosure Type: Bass-reflex via Tractrix port
- Weight: 8.25 lbs (3.74kg)
- Cutout Dimensions: 9.15” (23.18cm) diameter
- Mounting Depth: 8.25” (21.12cm)
- Overall Depth: 8.5” (21.59cm)
- Overall Width: 10.75” (27.3cm)
- Thru Hole Width: 9” (22.86cm)
- Finishes: White/Black
- Wire Gauge Accommodated: 14 AWG
- Pre-Construction Mud-Ring: 1010413

NOTES:
- Front access, high quality multi-tap transformer with 8 ohm bypass
- Pairs well with Klipsch surface mount speakers
- Works with Klipsch KPH-525 Pendant Housing for high/no suspended ceiling installs
- Pre-construction Mud Ring Kit available
- Available in Black or White

IC-650-T
6.5-INCH TWO-WAY IN-CEILING LOUDSPEAKER

The Klipsch IC-650-T houses a 1-inch titanium diaphragm compression driver on a 3.5-inch round modified XT Tractrix® Horn for smooth response with constant directivity. A Tractrix port design helps to provide deeper, fuller bass with less compression and distortion into an installer-friendly, UL-2043 and 1480 certified loudspeaker with an integrated back can and multi-tap transformer.

SPECIFICATIONS
- Frequency Response 1 (±3 dB): 50-20kHz ±4dB
- Power Handling 2: 80w (8 ohm bypass)
- Max Continuous Output 3: 106dB
- Sensitivity 4: 90dB
- Nominal Impedence: 8 ohm (8 ohm bypass)
- Tweeter: 1” (2.54cm) Titanium diaphragm compression driver
- High Frequency Horn: 90° x 90° Tractrix® horn
- Woofer: 6.5” (16.51cm) woofer
- Tap Settings: 7.5w, 15w, 30w @ 70V / 7.5w, 15w, 30w @ 100V
- Enclosure Type: Bass-reflex via Tractrix port
- Weight: 11.25 lbs (5.14kg)
- Cutout Dimensions: 10.13” (25.72cm) diameter
- Mounting Depth: 10.63” (27cm)
- Overall Depth: 10.94” (27.79cm)
- Overall Width: 10.75” (27.3cm)
- Thru Hole Width: 9” (22.86cm)
- Finishes: White/Black
- Wire Gauge Accommodated: 14 AWG
- Pre-Construction Mud-Ring: 1010414
A BETTER LOBBY SUBWOOFER SOLUTION

The Klipsch IC-SW-8T2 70/100V Subwoofer utilizes a unique transformerless design for the highest-performance in either background or foreground music applications. Since transformers, through compression that especially occurs at low frequencies, can severely limit a subwoofer’s capabilities - this application is the perfect solution when building a great sounding commercial system. The IC-SW-8T2 also employs a bandpass design that utilizes a passive radiator instead of a port, eliminating turbulence and the resulting distortion often present in ported designs. The IC-SW-8T2 has the ability to easily switch from low impedance to high impedance distributed-line applications as well as mono and two-channel inputs in low impedance modes.

IC-SW-8T2
DUAL 8-INCH IN-CEILING PASSIVE SUBWOOFER

Most distributed audio systems are plagued with thin-sounding performances, but the new IC-SW-8T2 in-ceiling subwoofer changes everything. Engineered for music reinforcement applications, these unobtrusive, easy-to-install loudspeakers feature a transformerless design for 70V/100V distributed-line systems with two wattage settings. Since transformers severely limit a subwoofer’s capabilities, this unique design is the perfect solution when building a great sounding commercial system.
